

## Exercise 1

1. Every thing has good and evil that depend on the user of those thing. So like that technology can be use good and evil purpose. In the future lot of people use technology for do there day to day works but some people use technology for unwanted thing.
2. Today communication is more developed because of the technology. in the past very difficult to communicate when we send letter that get lot of day to receive that letter to receiver but nowadays it become very simple because of the development of the technology. there are lot of way to communicate each others. Such as social media app, emails, phone calls.
3. In the world there is a competition so we have to fast pace of changes to face that competition. All the day to day works base on the technology so technology should be updated for their requirements.
4. Our some friend use some new technological devices. We can easily do our works and enjoy our time using that tools. Some friends do unwanted thing using that tools.

## Reflective Journal

Some say that no technology is inherently good or evil; rather, any technology can be used for either good or evil purposes.

Description,

I am second-year undergraduate students at Sri Lanka Institute of Information Technology (SLIIT). This incident occurred after one month I entered university that was the covid-19 outbreak. It was very affected normal life of the people. so that our university needed to continue our academic works thought online learning. Online working was not familiar in that moment however we were ready to face that challenge. When some days goes it became normal part of our life. that covid pandemic situation was unexpected to everyone and our campus got like one week for ready to delivered all academic works through online. All the educational places and some company closed because of the powerful of the covid-19 and it was new virus for the world. All over the world education system changed e-learning. I thing no want to say importance of the

technology , e-learning and online jobs are the best thing to do using technology. when we online working big problem is the internet facility because of our country is developing country so when all were internet the internet speed become slow and some area not cover connection so that people faced many problems in that situation. In the covid-19 pandemic period technology is very useful for survive our works.

Feeling,

I felt extremely confused and scare at the time when the covid-19 pandemic causes the whole country to lockdown. Before the lockdown announced all the student went there house instantly because of campus announced to closed. Like one or two week there was no any thing happen in our studding. So we spent time eating, sleeping and watching the news. All people confuse what will happen in our future and some businessman were faced many difficulty. Then the university introduces us to online learning concept. Lectures were sent to us thought online learning. But the situation was different compared to the real lecture hall situation. Main problem of we faced internet speed however we did our studies. We all clarified our problem using online platform and contact our friend using mobile phone. We had to do group project so that situation we could not meet our group members so we communicate using social media app and we did our project success. I thing that was the good moment when we talk important of technology.

Evaluation,

In the first two weeks after online learning commenced, felt boring, faced some connection problems and lot of data cost. But the issue resolved by time. Today in the market we can see a advancement of computers, laptop, phone and tabs. When some technical tool broken that was difficult to fixed because of all the shop were closed. Online learning and working is good side of information technology develop. In that situation some shit people got personal information and hack there social media account and bank accounts. That was an evil purpose in which the development of information technology was used. Online learning is become the top in the covid-19 situation. Lot of educational platform were made to study. Lot of improvement happened in education side to improve skills.

## Analysis,

Today computer landscape covered lot of facilities. Different platforms like the internet, email service, e-commerce and online learning. If we want to find any information so we can easily find out that information using internet and we can playing video games to enjoy our free times. As I learned thought the lecture there are several areas of concern in the current computing landscape. Those are Ethical issues, legal issues, social issues and Environmental issues. As a ethical issues, there were intellectual property, information collection, spam, Difference between personal choices, business policies and law. Some shit people send spam and if some open it there can be something happened for the device. If user known those thing he/she can ignore those and use device without any problem. As a legal issues, there were intellectual property and licensing, security vs privacy and cyber crimes. As a social issues, there were outsourcing and unemployment, digital divide and massive open online courseware (MOOC), computerized customer service, increased possibility of identity theft. As a Environment issues, those were E waste, Energy for manufacturing/operating and hard copies of document.

## Conclusion,

We should face challenge otherwise cannot become good and best person. If we want improve our future career we have to handle situation and change to that situations. In the beginning of the covid-19 pandemic our online learning panicked for us but after some days it became normal. I should also develop my knowledge and skill needed for developed online learning platforms. We communicated about our project using social media app and learning apps. So I got lot of knowledge how to do our project using online and I will improve my communication skills more than in the future.

## Action plan,

In the future I will focus on the right objectives when it comes to online learning and working. In the current covid-19 pandemic situation we have to solve all problems ourselves. If we get that opportunity for improve our skill and it useful for our future career. Issues should discuss with the group leader

and should get a solution from the university. We should get good idea about spam because of if we opened like that spam that can be damage our device and our privacy. This covid-19 and online learning experience made me realize that I need to gain more skills and confidence. I will improve my skill more to face like that situations.
